Restaurant, Zug

IMCZ to visit TOTAL ENERGY SYSTEM

Thursday 11 March 1999

Meet 18.45 hrs Lorzensaal Parkhaus, Cham -
the visit itself starts promptly at 18.55 hrs.

The Wasserwerke Zug AG are operating a total energy system in a newly developed area right in the centre of Cham. This consists of a central heating plant linked to a district heating scheme and using the River Lorze as both a hot and a cold source by means of a water-to-water heat pump. This installation is the first of its kind in Switzerland and features a cogeneration plant with a heat pump as a single unit. This design makes a range of operating modes possible although the plant is a little more complex as a result.

Initial results indicate that the design performance will be achieved as soon as building development is completed.

The aim of the project was to demonstrate the feasibility of an integrated design concept for an energy efficient installation for space heating and domestic hot water for several buildings in the development area. Other aims were to produce electricity at the same time and to introduce air cooling for public buildings together with the recycling of waste heat and the reduction of pollutants through the use of natural gas and catalytic converters.

To join the visit please complete the attached reservation and return it to David HARRIS to arrive by 9 March or contact him on one of the numbers given by that date.

As usual we will retire to a local restaurant after the visit for dinner, **this is of course optional**. Any food or drinks consumed will be at your own cost.
